

# Diabetes Patient Management Report

The Benchmarking Partnership's "Diabetes Patient Management Report" analyses anonymised patient level HbA1c test data to calculate optimum re-test interval analyses for your population. It generates data to show how well diabetes patients are being managed within each GP practice in terms of testing rates vs guidance, HbA1c severity, testing location (primary vs secondary), and the proportion of tests used for diagnostic vs monitoring.

This is a report which has been pivotal in helping clinicians to improve outcomes for patients with diabetes for many years, through improving the appropriateness and effectiveness of testing and reducing the number of bed days for diabetes.

## This report does the following:

- ✓ Provides guidance on how often to test HbA1c in order to achieve the correct balance between best outcome for diabetes patients and the most cost effective solution to the health economy
- ✓ Provides GP level data to show how effective patients are being managed within each practice, including how testing rates compare with guidance, how HbA1c severity is changing over time, and where patients are being tested
- ✓ Guides you towards a demand optimisation strategy that will improve outcomes for patients with diabetes whilst simultaneously generating cost savings for the related health economy

This report requires provision of a raw CSV/TXT/XLS download file taken from your LIMS system. A full download guidance spec sheet will be provided, and we will work with you to ensure you are happy with the figures prior to production of your final version report.
