Diabetes Urgent Test Report

The following patients from the highest HbA1c control groups are overdue their regular HbA1c test, according to data held on the laboratory IT system.

For each patient below we have provided data to show their most recent test result, how that result changed compared with the previous result, and when that most recent test took place. The final column shows the date the missed test was due, and uses a traffic light colour coding system to highlight how far overdue the test is.

Missed test due dates are calculated using NICE recommended intervals based on previous test result.

In a time of increased pressure and challenge with limited resources, we hope you will find this report to be a useful tool in helping to manage your most at-risk patients.

Total Tests Due In Each Priority Category

7) >86	4
6) 76-86	6
5) 59-75	14

NHS Number	Patient Name	Date of Birth	HbA1c Control Group	Change vs		Most Recent Test Date	Missed Test Due Date
